

**DBF1.08SN Series**  
ON/OFF and Floating Point Electric Spring Return Actuators

**Application**

The **JOVENTA SPRING RETURN** electric damper-actuator series has been specially developed for the motorized operation of air dampers in air conditioning systems.

When the control signal is applied the actuator drives the damper to the operational position, while evenly tensioning the integrated spring. After a power failure the stored energy in the spring immediately brings the damper to the safety position.

Manual operation is automatically cancelled when the actuator is in electrical operation.

The compact design and universal adapter fitted with limitation of rotation angle make this actuator highly versatile.

**Features**

- ON/OFF and Floating control signal
- Up to 5 actuators in parallel operation possible
- Electrical connection with halogen-free cable
- Simple direct mounting with universal adapter on Ø 8 mm to 16 mm shaft or 6 mm to 12 mm square shaft.  
An optional M9208-600 Jackshaft Coupler Kit is available for 12 to 19 mm round shafts, or 10 mm to 14 mm square shafts
- Limitation of rotation angle
- Manual positioning with crank handle
- 2 auxiliary switches, 1 adjustable (See page 3 for settings)

Setting the auxiliary switches

These models include two integral auxiliary switches, one fixed (S1) and one adjustable (S2), accessible on either face of the actuator. The nominal factory setting for S1 Auxiliary Switch is 11° closing, and the nominal factory setting for S2 Auxiliary Switch is 81° opening (relative to a 0 to 90° rotation range).

The switch point of S2 Auxiliary Switch is independently and continuously adjustable from 20° to 85° (relative to a 0 to 90° rotation range).

Use the method in the following example for the most accurate positioning of S2 Auxiliary Switch.

1. Move the actuator to the full spring return position.
2. Rotate the switch adjuster until it points to the desired switch point.
3. Connect S2 Auxiliary Switch to a power source or an ohmmeter, and apply power to the actuator. The actuator moves to the fully open position and holds while power is applied.
4. Observe the switch point. If required, repeat Steps 2 and 3.

Limitation of rotation angle

Using the M9208-603 the angle of rotation can be limited. The actuator is factory set for 95° rotation, and its range is limited in 5° increments to a minimum of 35°.

Attaching the stroke-limiting stop in the furthest mounting position reduces the rotation range of the actuator by 5°. Each progressive position reduces the rotation range on additional 5°.
